OUR NEW BRAND 2021

We create exceptional products for people who push themselves, break new ground and explore the unknown. They are visionaries in uncharted territory, beyond their comfort zone. By supporting them, deuter gives these people the freedom to pursue their passion for the mountains.

DEUTER IS FOR TRAILBLAZERS

Over the last 120+ years, deuter has gone through many changes. From the beginning, we adopted a bold and innovative approach. Now, we are reshaping for the future with a new logo and brand design that speaks to trailblazers and mountain enthusiasts the world over – the mountaineers, the climbers, the skiers and boarders, and lovers of outdoor adventure.

DEUTER IS FOR PERFECTIONISTS

As one of the earliest pioneers in mountaineering and expedition equipment, we have a wealth of experience to draw on. Throughout the design and testing process, we also rely heavily on the knowledge and expert opinions of the deuter Family, a select group of professional athletes. It's how we are able to perfect our products – products whose reliability and uncomplicated functionality make them ideal companions when exploring mountains and the natural world.

DEUTER IS FOR FREETHINKERS

Our love of the extraordinary natural world and the experiences we share amongst it is what connects us all. These connections demand that we protect and preserve the environment we love for future generations. That is why we have done away with PFCs in our manufacturing processes, we use natural resources in a responsible way, and we ensure fair working conditions and animal welfare throughout the supply chain. To help us achieve this, we comply with the most stringent international standards and collaborate with partners that share our values. By focusing on quality, using durable materials and offering a lifelong repair service we are able to ensure that deuter products have the longest lifespan possible.

DEUTER IS FOR SUMMITEERS

At deuter, we live and breathe mountain sports. Mountain athletes and adventurers, summiteers and all those drawn to high places – these are our inspiration. By pushing boundaries, testing possibilities and exceeding limits we harness every outdoor experience as a source for innovative ideas and product solutions – made by mountaineers, for mountaineers.

360°

CORPORATE RESPONSIBILITY AT DEUTER

Social responsibility and environmental protection are deeply embedded in the deuter company ethos. It's part of who we are and guides our daily efforts.

360° means achieving sustainability from the very start of a product's life – from the recycled and sustainable materials, and the manufacturing of our high-quality products together with our established partners – right the way through to our repairs service.

We take a holistic approach to product development and are full accountable for our supply chain. We are supported along the way through our collaboration with sustainability initiatives and the application of recognized standards.

deuter has been a member of the Partnership for Sustainable Textiles since June 2015. The partnership is an initiative set up by the German government in October 2014. Its members from business and civil society, standards organisations and trade unions have set out to improve the social, environmental and economic conditions throughout the textile supply chain. For more information visit: www.textilbuendnis.com

SOCIAL ENGAGEMENT AND PARTNERSHIPS

Fair Wear Foundation is an independent multi-stakeholder initiative that works together with brands and manufacturers. Its aim is to improve working conditions throughout the textile and apparel industry, especially locally, in manufacturing countries. deuter has been a member of the FWF since August 2011 and has committed to its strict working guidelines.

FWF has recognised this commitment and granted deuter 'Leader Status' for several years in a row.

- long-standing partnership with just two suppliers
- FWF Leader Status since 2013
- FWF Best Practice award 2015

ECOLOGY & GOOD SUPPLY CHAINS

The bluesign® system is the world's strictest standard for environmental protection, occupational safety and consumer protection throughout the textile industry. As part of the bluesign® system partnership since 2008, we are actively working to make our products and the entire supply chain more resource-

efficient and environmentally friendly: from the design right through to delivery.

- 100 % T1-supplier (direct production partners) bluesign® system partners
- bluesign® products: ASTRO-series, Kikki, UP Series, Urban Belts

ANIMAL WELFARE

To be Responsible Down Standard (RDS) certified, the entire supply chain must be fully traceable – from the chicks to the finished sleeping bag – and the strictest animal welfare standards upheld. And so,

to ensure that species-appropriate rearing procedures and animal welfare standards are sustained throughout our supply chain, since June 2015 we've exclusively used down and feathers from certified suppliers.

PFC FREE

ALL DEUTER PRODUCTS WILL BE PFC-FREE FROM SUMMER 2020!

PFC (perfluorinated and polyfluorinated compounds) are a group of chemicals that are harmful to the environment and to our health. These chemicals are found in a wide range of everyday items such as kitchenware, pizza boxes, paper and also textiles like rain jackets.

Once released into the environment, they disperse extensively. Scientists have found traces of PFCs in drinking water, air, blood, polar bears and in breast milk. Some PFCs can even have a detrimental effect on reproduction and cause cancer. Harmful fluorocarbons degrade extremely slowly - over several hundred years - if at all.

SO WHY ARE PFCs USED?

PFCs are used because of their water, dirt and grease repellent properties and are therefore also used in breathable membranes. PFCs are particularly popular in the outdoor trade as a means for impregnating textiles. Without a water repellent coating, fabrics would soak up water and become heavy and wet.

For more information, visit our web pages:
www.deuter.com/responsibility

DEUTER IMPREGNATE IN AN ENVIRONMENTALLY SOUND WAY BY...

deuter has pledged to make all of its products fully free from fluorocarbons (PFCs) that are harmful to people and the planet, but without compromising on functionality. This presented a huge challenge for deuter. For a long time now, there has been no comparable alternative to these perfluorinated chemicals.

It was only when Greenpeace launched its "Detox My Fashion" campaign in 2012 that suppliers and the chemicals industry as a whole started to work on alternative, environmentally friendly ways of making textiles waterproof. Several outdoor brands, including deuter, were quick to react.

To ensure water and dirt repellent performance, deuter now only uses DWR (Durable Water Repellent) treatments that are fully free from PFCs and not harmful to people's health or the environment. This special kind of coating causes water to bead off the outer surface of textiles to keep the product dry. By using this method, deuter is making good progress towards its goal of ensuring all of its products are PFC-free by 2020. So that future generations can keep exploring our wonderful world together with deuter.

WHERE ARE DEUTER PRODUCTS MANUFACTURED?

It takes a lot of experience and skill to guarantee such high standards in quality and durability - and consequently a skilled team of experienced, driven employees. That's why deuter only works with two long-standing manufacturing partners. All of our backpacks, bags and accessories are made in Vietnam, where our partner Duke, has exclusively manufactured for us, across three factories, since 1994. Bellmart, has manufactured all our sleeping bags since 2003. Bellmart makes our down sleeping bags in China, while our synthetic sleeping bags are made at its site in Myanmar.

LIFELONG REPAIR SERVICE

At deuter, we stand by the quality of our products and are committed to sustainability. This commitment starts with product development and does not, however, end with the sale of our products. That's why we give our customers the 'deuter Promise' of worldwide, lifelong repairs to their much-loved gear.

Our responsibility does not end with the sale of our products. We are proud of the fact that deuter products are known for their durability. And through our repair service, we extend the working life of our products as much as possible.

For more information, visit our web pages: www.deuter.com/promise

deuter has developed different systems specifically adapted to the various sports and their specific demands.

deuter
AIRCOMFORT

HIKING / TREKKING

On small to medium backpacks that are at home in easier terrain we go for maximum ventilation. The heart of the Aircomfort systems – tested and proven for decades – is its flexible spring steel frame. It is extremely durable, provides stable tension for the airy back mesh and creates the ventilation space between pack and wearer's back for the moist, warm air to dissipate. 1984 deuter invented & patented the first mesh back system worldwide.

THE RESULT:

Up to 25 % less perspiration thanks to the maximum ventilation achieved by the Aircomfort mesh construction. This reduces circulatory stress for more endurance – tested and proven by the renowned Research Institute Hohenstein.

deuter
AIRCONTACT

TREKKING / HIKING

The easiest way to carry heavy loads is when backpack and wearer become one. This is what our Aircontact principle is all about: the body contact system brings the weight close to the body and therefore close to the center of gravity. This results in full pack control and an effective load transfer. Furthermore, our Aircontact cushions made from special hollow chamber foam guarantee fantastic ventilation due to the pump effect of every movement.

THE RESULT:

Up to 15 % less perspiration as with a standard compact back system (proven in tests conducted by Gabriel L&T and the University of Erlangen) – combined with outstanding load transfer and a secure, perfectly balanced fit.

deuter
AIRSTripES

BIKE / DAYPACK

A bike pack always has to sit secure and snug on your back – even on the roughest rides. Our unique Airstripes System takes care of that and offers effective ventilation. It consists of two contoured, air-channelled foam profiles that are covered with a highly breathable Wide AirMesh lining. The reduced contact surface results in an optimized fresh air circulation. Also, the pack's load is kept close to the body and thus won't throw the rider off balance.

THE RESULT:

The minimal contact surface area of the profiled Airstripes allows free air circulation over 80 % of the riders back, while still providing a secure, compact fit even on rough rides.

deuter
ALPINE

ALPINE

For alpine backpacks the combination of comfort, durability, functionality and low weight is essential. deuter's Alpine System answers this challenge by focusing on a compact, secure yet comfortable fit with its two flexible softstripe back pads that are perfectly adapted to the anatomy and follow the wearer's movements. In combination with the pack's sleek shape this keeps the load always close to the centre of gravity – thus guaranteeing full pack control.

THE RESULT:

The Alpine back combines a secure, compact fit for full pack control and full focus on the terrain with a top carrying performance and a comfortable ventilation between the two softstripe back pads.

deuter
LITE

HIKING / ALPINE

Our lightweight backpacks come into their own during endurance sports and Alpine day treks. Reduced to the essential, they are ideal for comfortably carrying light to medium loads depending on the volume. However, lightness must never come at the expense of durability. That is and always was our corporate philosophy, because disposable products put a strain on the environment and a backpack that falls apart high up in the mountains can also be dangerous.

THE RESULT:

Our lightweights are designed for everyone who wants to travel light without forgoing carrying comfort and durability.

deuter
CONTACT

TRAVEL

The ergonomically shaped back cushions of the Contact System hug the back and distribute the weight of the load evenly, relieving the load on the back. Additionally, loads are carried easiest when they are close to the body. Channels between the cushions as well the breathable, sturdy 3D Airmesh lining provide pleasant ventilation.

THE RESULT:

Ergonomically shaped Contact back cushions provide carrying comfort that relieves the back while keeping the weight of the load close to the body and distributing it evenly.

EL-SERIES

Extra Long Series

SL-COLLECTION

Female specific packs

DEUTER SL-Team

deuter's product development team for the women's specific SL line consists of female designers and top athletes from all disciplines / sports. It's almost an occupational habit that our experts can never stand still. Since 2006 they are always pushing forward - also when it comes to developing products.

Our rucksacks are designed to fit the average athletic build. However, since not everyone fits the norm it is likely that women's models will fit many male users perfectly well, and vice versa.

Futura 29 EL

Futura 34 EL

Futura Pro 42 EL

Trans Alpine 32 EL

Glga EL

SHORTER BACK

Women usually have a shorter back than men. Our SL carrying systems are adapted to the female anatomy and therefore shorter.

SLIM-CUT SHOULDER STRAPS

The SL shoulder straps have a distinct S-shape and all-round soft edges. In addition the straps become slimmer towards their ends. For a perfect fit around the shoulder area - no pinching or chaffing. The shoulder straps lie closer together and are adapted to slimmer female shoulders.

CONICAL HIP-FINS

The closed SL hip belt forms a cone to perfectly adapt to the female anatomy. The conical shape is the result of the the ends of the hipbelt coming together in an upward direction and the anatomically adapted design for the SL hip fins. The hip fins perfectly hug the female hips.

Standard Fit

THE DEUTER EXTRA LONG SERIES

Tall people can enjoy a perfect fit with our Extra Long EL-models! Taller sportsmen and -women between 1.85 - 2 m often have difficulty finding backpacks that fit their longer backs. Our favourite deuter backpack models are available to suit taller people with extended back lengths by 6-9 cm. Overall, backpacks in the Extra Long (EL) series have also grown in terms of volume. Back systems, features and details remain the same in the EL models as they are in the standard models, however.

- two stretch side pockets
- front stash pocket
- side compression straps
- key clip
- Material: 210D PA RECYCLED, 600D PES

deuter
AIRCOMFORT

PERFECT FIT

thanks to the VariSlide system for custom back length fit to any size. Mobile VariFlex ECL hip fins and ActiveFit shoulder straps wrap around the body. This means that even heavy loads can be carried in comfort, with the load moving in unison with the body, thereby saving energy. The ergonomic Aircomfort Sensic mesh back system keeps air flowing across the back for superior ventilation.

MORE CAPACITY

and extra organisation thanks to the stash pocket at the side which can also accommodate a Streamer. The height-adjustable lid also expands the volume of the pack by 10 litres.

MULTISCHOCK SAS-PROTECTOR SYSTEM

deuter
CONTACT

MAXIMUM PROTECTION

The Attack is fitted with a removable TÜV/GS certified SAS-TEC back protector. The materials used in the carry system are designed to further support the functionality of the back protector. Together, they provide the highest level of protection - in accordance with motorcycle safety standards. The back protector is made of special 'memory foam' that returns to its original shape after impact.

SECURELY STASHED

A full-face helmet can be securely stashed to the outside of the pack using a new system that requires just one strap.

- PFC-free water and dirt repellent finish
- Material: 600D PES COAT, 225D PES

Attack 8 JR
3612121
3915 arctic-mandarine | 4409 graphite-shale
990 g | H 42 x W 24 x D 14 cm

SECURE FIT
thanks to high-set hip fins that sit snug against the body no matter what.

MAXIMUM PROTECTION

The Attack is fitted with a removable TÜV/GS certified SAS-TEC back protector. The materials used in the carry system are designed to further support the functionality of the back protector. Together, they provide the highest level of protection - in accordance with motorcycle safety standards. The back protector is made of special 'memory foam' that returns to its original shape after impact.

SECURELY STASHED

A full-face helmet can be securely stashed to the outside of the pack using a new system that requires just one strap.

MORE SPACE

Two straps on the lower section of the pack can be used to attach protection equipment, leaving more space inside the pack.

SLEEPING BAG

ASTRO PRO SERIES

bluesign
PRODUCT

Details Astro Pro 400, 600, 800, 1000

For mountaineers and trekkers looking for maximum insulation at minimal weight for extreme conditions.

Thermo Stretch Comfort seams inside: faster to warm up and comfortable to sleep in thanks to the liner that stretches up to 25 % across the width

ErgoFootPro: more sensitive foot zone is given extra space in 3D ergonomic footbox for superior insulation

ThermoHood contoured hood for a cosy head with down held securely within chambers

inside pocket

PowerBox waffle structure in the lower part of the bag keeps the down in place no matter how much movement

Dryzone: water repellent fabric with PU coating at the foot and head

draft collar

Trapezoidal chamber design prevents the formation of cold spots

- top heat-to-weight ratio and packing dimensions
- contrasting draw cord toggles for easy hood adjustment (even in the dark)
- 360° insulation
- compression sack: lightweight, lateral compression, easy-to-use
- storage sack included – protects the down and keeps it well aired
- 2-way zip
- anti-snap zip baffle

- bluesign® product
- RDS certified down
- PFC-free water and dirt repellent finish
- perfect for alpinists – both inside a tent under a starlit sky
- Filling: 650+ cuin / 90/10 Down RDS/ bluesign®
Inner shell: 20D PA RIPSTOP
Outer shell: 20D PA RIPSTOP + DWR

Details Astro Pro SL

- SL models are shorter in length and the shoulder and foot sections slightly narrower
- SL models have proportionally more down fill compared to REG models

SUSTAINABILITY

The lightweight Astro Pro down sleeping bag is a bluesign® certified product manufactured to strict environmental and social standards, with minimal impact on people or planet – so you can enjoy a good night's sleep with a clear conscience. We also only use down that carries the Responsible Down Standard (RDS).

WARM WITH ROOM TO MOVE :

The liner stretches by up to 25% across the width for unrestricted movement and fewer air pockets inside the sleeping bag that require warming. The more sensitive foot zone is also given extra space in a 3D ergonomic footbox for superior insulation.

WARM AND COSY

with the same amount of fill and same construction top and bottom. Using our 360° fill system means we can guarantee the comfort rating of our sleeping bags in any and all sleeping positions – and no more cold back either.

COMPACT

The lightweight compression sack with new lateral compression means the bag packs down so small it easily stows in any pack. In order to care for the down, we recommend you store your sleeping bag loose in the mesh storage sack.

360° fill system for 360° warmth

The top and bottom layers of a deuter sleeping bag are identical and contain the same amount. That's because we are aware that despite EN-norm tests assuming that a person will lie on their back, in reality, people move about in their sleep. By using our 360° fill system, we can guarantee our comfort ratings in all sleeping positions – and no more cold back!

100% RDS certified down: the Astro series

- No live plucking
- No forced feeding
- Traceability in the supply chain
- Animal welfare assured at all times
- Certified and controlled by
- accredited institutes worldwide

- main compartment with built-in RFID/ NFC blocking data theft protection
- two carry options: against the skin, or over clothing as shoulder bag
- adjustable, detachable waist strap
- adjustable shoulder strap
- two zipped pockets
- mesh inner compartment
- washable
- Material: 50D PA RIPSTOP

Security Flip In
3951121
7000 black | 6010 sand
20 g | H 11 x W 16 cm

Travel | City

- secret pocket attaches to your belt and folds over the top of your waistband
- black or brown attachments straps matching the belt
- two slot compartments
- soft lining
- Material: 50D PA RIPSTOP

Security Belt
3951021
7000 black | 6010 sand
80 g | H 3 x Length 135 cm

Travel | City

- hidden internal pocket with ca. 46 cm zip
- stepless length adjustment
- robust lock
- Material: PP WEBBING

STREAMER

Streamer 1.5 (Pulse 3)
3960021
0000 transparent
170 g | H 22 x WB 44 cm
Pulse 3: see page 159

Streamer 2.0
3960121
0000 transparent
175 g | H 35 x W 19 cm

Streamer 3.0
3960221
0000 transparent
185 g | H 42 x W 21 cm

Biking | Hiking | Mountaineering | Trekking

- keep fit for longer: enables regular hydration without interrupting sports activities
- large streamer opening for easy filling and cleaning
- very hygienic thanks to smooth surfaces
- leak-proof mouthpiece with push-fit cap: Twist-activated water-stop lock
- Material: CO-EXTRUDED PE - whole system is free of BPA and PFC

TASTE-FREE™
The special film inside the bladder is as smooth as glass. Due to the special molecular properties, this system is very hygienic, taste-free and easy to clean.

GRUNGE-GUARD™
Antimicrobial technology blocks bacteria growth in the bladder.

Streamer Tube & Helix Valve
3960421
0000 transparent

Streamer Helix Valve
3960321
0000 transparent

Biking | Hiking | Mountaineering | Trekking

With light pressure the drip-proof mouthpiece is activated and flows at a comfortable rate. The integrated spring valve causes the mouthpiece to shut automatically. Easy to take apart for cleaning.

Streamer Slider
3960521
9000 orange

Biking | Hiking | Mountaineering | Trekking

Easy Clean
Full width top opening for easy filling and cleaning. Absolutely leakproof thanks to the easy to use sliding clip.

STREAMER

Streamer Thermo Bag 3.0 (3 L)
3960621
4000 granite
120 g | H 44 x W 24 x D 2 cm

Biking | Hiking | Mountaineering | Trekking

- insulating thermo-material keeps the drink warm in winter and pleasantly cool in summer
- can be carried inside the backpack or outside (on side loops)
- Material: 210D PA RIPSTOP

Streamer Tube Insulator
3960721
7000 black
70 g | length 70 cm

Biking | Hiking | Mountaineering | Trekking

- prevents the liquid from freezing quickly in the tube in cold conditions
- quick and easy to assembly thanks to a separable zip
- hook and loop strap for attachment to a shoulder strap
- Material: NEOPRENE

Streamer Tube Brush
3960821
0000 transparent
50 g | length 100 cm

Biking | Hiking | Mountaineering | Trekking

- long flexible brush for removing residue from inside the streamer tube
- Material: NYLON / STAINLESS STEEL

CLIMBING

Gravity Chalk Bag I M

- loop for hip belt attachment
- emergency instructions
- grab handle
- Material: 420D PA RIPSTOP

BACKPACK MATERIAL

Our manufacturing process well as the quality of the textiles we use ensures the long-time durability and longevity of our products. The materials we use are adapted to their future use as backpack textiles and produced especially for deuter. Performance, deuter's standards, and their safety for consumers are regularly tested in labs and are therefore assured.

The majority of the raw material we use in our textiles is polyester (PES) and polyamide (PA). They handle well due to their properties and they are robust and tearproof. The outer fabrics we use, especially our rain covers, are water resistant. This provides ideal traits of products that are intensively used outside like our backpacks and sleeping bags.

All our textiles are coated on the inside, making the respective material more durable, more water repellent, and the seams more stable. The consistency and strength of this polyurethane coating (PU) varies depending on its future use. The outside of our textiles is treated with a DWR (Durable Water Repellent) coat to obtain a high level of water and dirt repellent properties. We only use PFC free finishings.

We use textiles in differing strengths to make sure our products fulfil their respective function. We state these in denier (D). This measurement unit is established in the outdoor market and has lead to comparability within our own collection. It goes back to the old French unit of weight also called denier. This means that 1D = 1 gramme per 9000 meters of yarn. The lower the number in front of the "D" the thinner the respective textile. Our unit therefore describes fabrics that range from very sturdy and durable to extremely light textiles.

However, the durability and strength of a textile cannot only be taken from its denier number. The weave, structure,

and application-oriented mix of raw materials also plays a role. The finishing of the yarn before the weaving process also has a decisive impact. We also state relevant equipment and features. Weaving in stronger threads or reinforced structures can make thinner material more durable and more stable. We call this feature "Ripstop" for example. If other processed or surface-finished yarns are used then the product is labelled with "high tenacity".

YKK® zippers: The most high-quality zippers available on the market are absolutely robust and reliable.

Multi-chamber aluminium profile rails: The weight-bearing elements of our backpacks are made from high-quality aluminium. This makes them durable and light at the same time. Its special constructions makes it possible to combine these two traits. A flat aluminium rail is separated into several different chambers by internal partitions. The cross sections shows a hive-like structure that provides stability. The multi-chamber aluminium profile rails are used in differing widths depending on the model of the backpack.

Permanently elastic spring steel frames: Spring steel is incredibly durable and elastic. It springs back into form again and again nearly unbreakable after being deformed. A round profile allows a very flexible construction of the frame. A flat profile provides a frame with extremely high form stability. Both give our Aircomfort models with its patented ventilation a permanently stable tension of the back net.

SLEEPING BAG MATERIAL

Our upper materials and filling for sleeping bags are made of polyamide and also polyester for the most part. We predominantly process textiles with low deniers. These are also often structured. The fabrics are light and at the same time very durable and always moisture repellent. PFC free materials are increasingly being used. In addition we also make sure to use breathable materials to ensure pleasant sleeping conditions.

Fabric in the so-called Dryzones is especially processed and enables a high water column. The sleeping bag stays comfortably dry.

Our fillings are also light and comfortable. Good insulation properties and breathability are necessary requirements for the materials that we use in our products.

Some of our sleeping bags used brushed materials like the Brushed Thermo Fleece. The light and very high-quality polyester fleece feels soft and cozy to the skin due to its fluffy brushed surface. The material offers an excellent warmth-weight ration. Furthermore it is highly breathable, long-lasting, and easy to clean. Its short drying time is another benefit. Its high level of elasticity supports freedom of movement of

the Thermo-Stretch-Comfort-construction in our Exosphere SL models. It also keeps warm in the Orbit SL models.

FILLING SLEEPING BAG

Synthetic

High-Loft Hollowfiber: Synthetic hollow fibres are processed to a filling fleece (by thermal bonding). To ensure good compression and high loft, silicone is added. Remarkable insulation rating, tear resistant and durable.

Thermo ProLoft®: A special thermal process turns Polyester fibres into top quality technical Thermo ProLoft® insulating fleece. The combination of dense and hollow fibres results in the perfect blend between durability, weight and warmth properties - a fleece material that is easy care and durable yet compact and offers excellent insulation at minimal weight. The synthetic fibres also absorb very little moisture. Short drying times, excellent loft and thus insulation properties even when damp, are all advantageous characteristics. deuter Thermo ProLoft® is also coated with a thin layer of silicone to give it good lofting properties.

Combining: deuter sleeping bags Orbit, Exosphere and Space can be zipped together. Use left-hand zip and right-hand zip versions when combining.

Down

Since June 2005 we only use down feathers certified in accordance with the Responsible Down Standard (RDS) - benefits: no live plucking, no force feeding, supply chain traceability, animal welfare guaranteed at every stage and verification by independent certification institutes around the world.

Composition: The deciding factor in a down sleeping bag is the down quality. Primarily this is a matter of the weight ratio of down to small feather mixture, which is expressed in percent. deuter uses only the high performance filling ratio of 90% down to 10% small feather (90/10).

Fill power / cuin: High quality sleeping bags should have a fill power of at least 650 cuin (cubic inches). This measurement in cubic inches per ounce of down shows the quality of the bulking and expansion power of the filling. High quality down has a bulking volume of 650 cuin (10.6 litres) per 1 ounce (28.3g). A bulking power of 550 cuin, and higher is good; of 650 - excellent; and 800 is almost impossible. In the end: the higher the volume the better the insulation value.
