

SMITH

SNOW CATALOG 2024/25

A dynamic action shot of a skier jumping over a snowy ridge. The skier is in mid-air, and a massive, billowing cloud of snow is being kicked up behind them, partially obscuring the background. The skier's body is angled downwards, and their skis are visible at the bottom of the frame. The ridge they are jumping over is covered in snow and has some dark, rocky patches. In the background, a clear blue sky and a few snow-covered evergreen trees are visible on the right side. The overall scene conveys a sense of speed and the exhilaration of winter sports.

The experience is everything.

CONTENTS

Goggles p.05

**Performance Snow
Eyewear** p.115

Technologies p.124

Overviews p.128

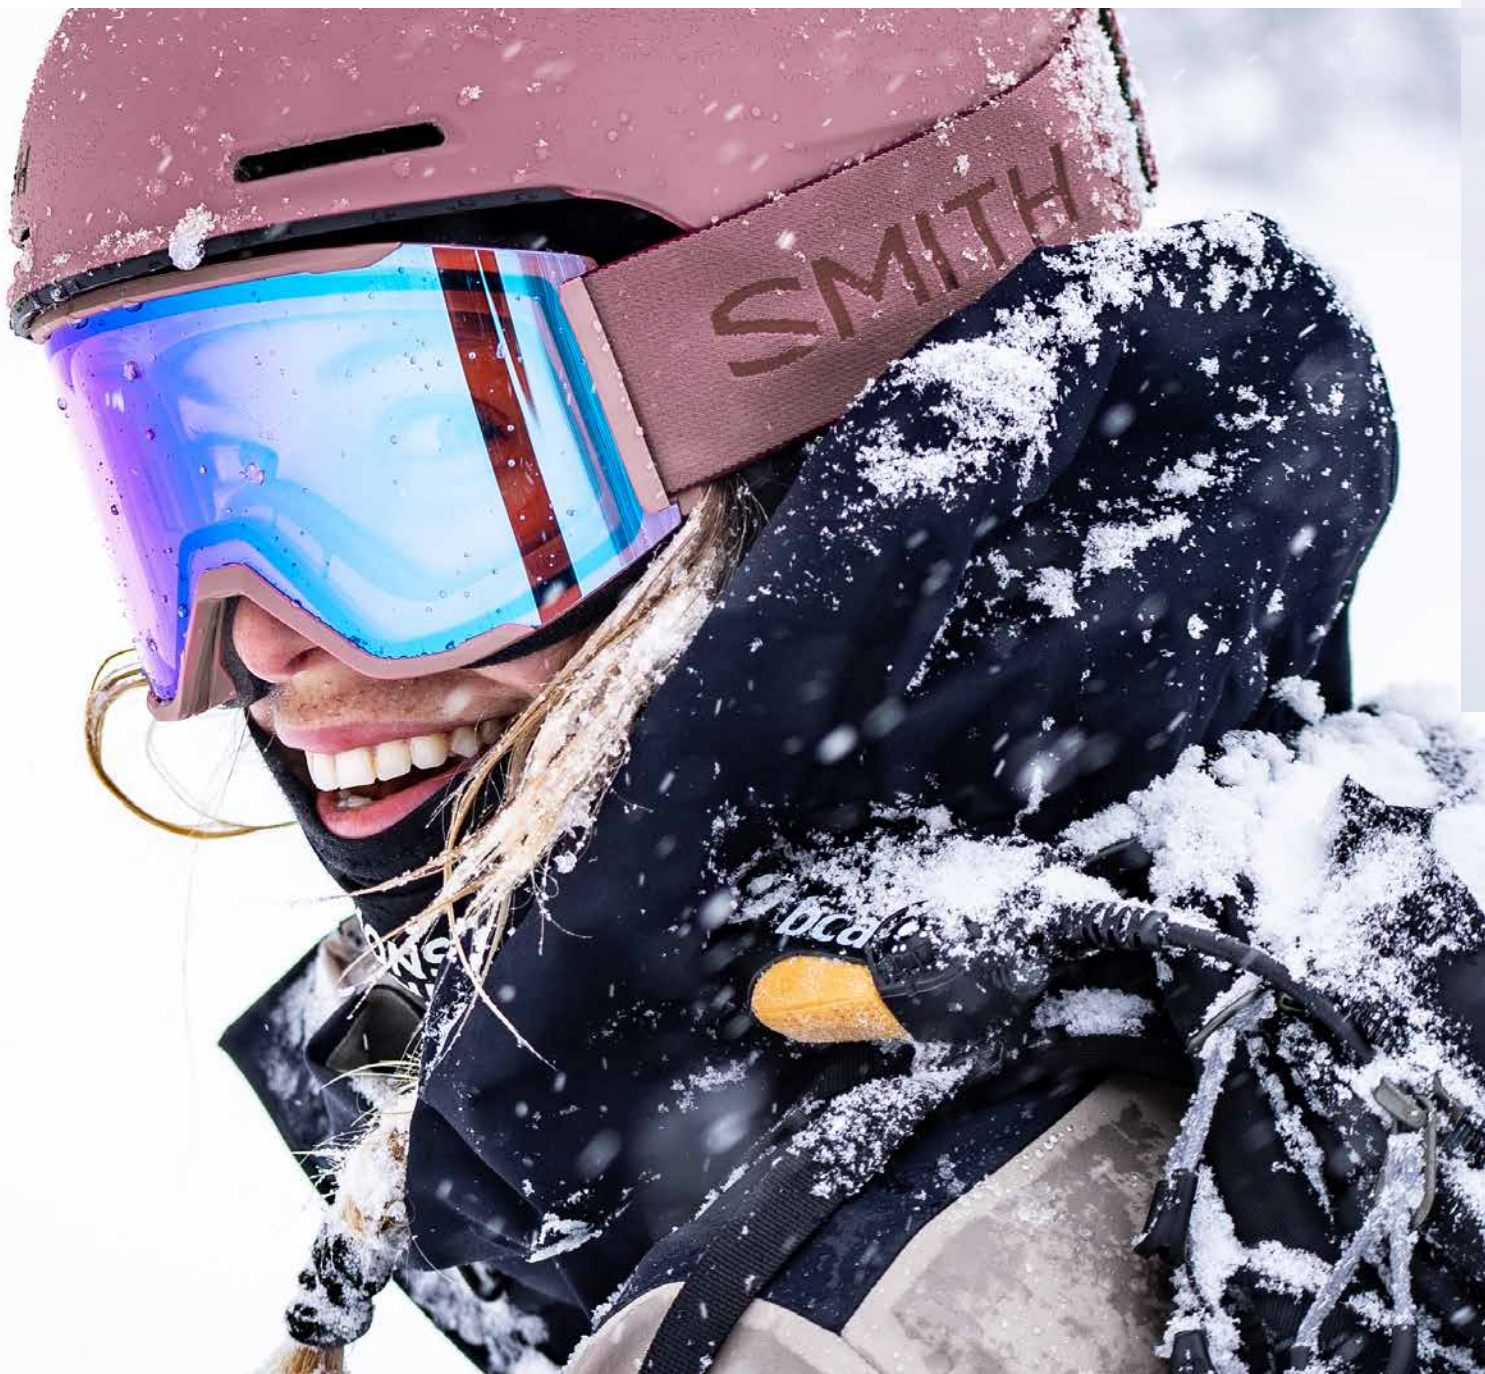

A full-page photograph of a snowy mountain landscape. In the foreground, a steep, snow-covered slope descends from the right towards the left. The snow is bright white with some subtle shadows and textures. Several evergreen trees are scattered across the scene. One large, well-developed evergreen stands prominently on the upper right slope, its branches heavily laden with snow. To its left, further up the slope, are two more evergreens, one of which appears to be shedding snow, creating a misty or spray-like effect. In the background, more trees are visible against a bright blue sky filled with soft, white clouds. The overall scene is bright and crisp, suggesting a clear winter day.

GOGGLES

CHROMAPOP™
| | | | | | | | | | LENS TECHNOLOGY

Experience next-level perception.

ChromaPop™ lens technology delivers enhanced color, clarity and definition, so you never miss a moment that matters. Because when you're more in-tune with your environment you can do more of what you love.

How does ChromaPop™ lens technology work?

Normally, our eye's retina has trouble perceiving the difference between blue and green, and red and green light. ChromaPop™ lens technology integrates with our various lens tints and materials to filter these specific crossovers, allowing greater definition, natural color, and clarity.

CHROMAPOP™
| | | | | LENS TECHNOLOGY

Which ChromaPop™ lens is right for you?

DO MORE WITH LESS.

ChromaPop™ Snow lenses do more work. With just one *ChromaPop™* lens you experience enhanced definition and clarity across a greater range of conditions than with traditional lenses.

CHROMAPOP™ SUN

Perfect for cloudless, blazing light conditions, these lenses ease the harsh glare of high elevation sun while helping your eyes see more information in the terrain ahead of you.

CHROMAPOP™ EVERYDAY

Suited for a range of conditions, enhances every undulation of snow so you get more out of every moment.

CHROMAPOP™ STORM

Tuned to bring the most out of an environment when the storm moves in and the lights go out. Optimize contrast even on the worst days, so you can stay out longer.

VLT - VISIBLE LIGHT TRANSMISSION

The VLT rating on Smith lenses shows how much light passes through them. The higher the VLT rating, the more light comes through that lens. Lower VLT rated lenses are good for bright, sunny days, whereas higher rated lenses are best in cloudy or low light situations.

PRO PHOTOCROMIC

The world's first blend of proprietary lens enhancement technology combined with the world's best photochromic lens - specifically engineered for optimal performance in cold conditions.

PHOTOCROMIC

These lenses feature UV sensitive, self-tint-adjusting photochromic technology to bring you lenses that adapt to changing light conditions, so you always have the perfect tint for the amount of light.

Adapt to the ever-changing light conditions for the best possible view.

Introducing our new ChromaPop™ Pro Photochromic lenses — the ultimate solution for changing light conditions in snow goggles. Experience next-level perception with our enhanced color-boosting ChromaPop™ Lens technology combined with an industry first lens formulation delivering the world's best photochromic performance and the fastest transition times. ChromaPop™ Pro Photochromic boasts a light transmission range from Category 1 (56% VLT), to Category 3 (16% VLT.) From the stormiest conditions to the bluebird days, let ChromaPop™ Pro Photochromic technology adjust for you, so you can focus on the adventure ahead.

Adapt with *MAG*

CHANGE IS EASY.

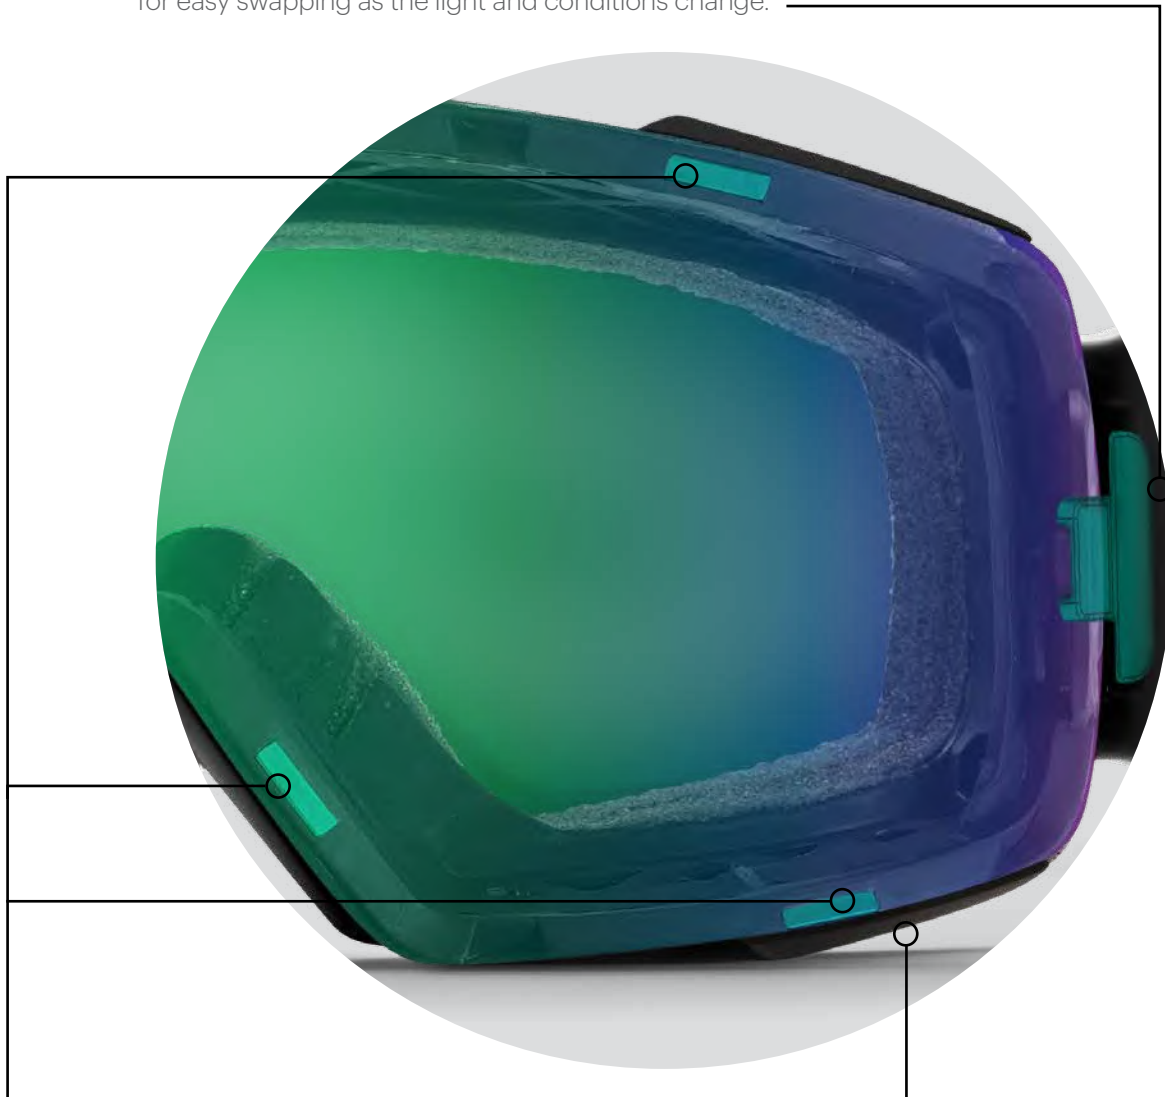

MAG technology allows you to quickly
adapt for any condition.

Smith *MAG*

Smith *MAG* proprietary technology enables you to quickly adapt to varying light conditions with the confidence of lens security. The next generation of Smith interchangeability has arrived.

DUAL LOCKING MECHANISMS

Once in position, the lens carrier provides a patent-pending dual locking mechanical engagement to secure the lens. With the Smith *MAG*'s two locking mechanisms, the lens stays locked tight for whatever the hill throws at you. A simple push of one lever at either side of the lens releases the lens for easy swapping as the light and conditions change.

MAGNETIC CONTACT POINTS

Strong and weatherproof N52 magnets automatically guide the lens into the anchored position. The magnetic function speeds up lens changes to get you back out riding faster.

CONSIDERED DESIGN

Plastic grips are carefully considered and designed at the corners of the lens for easy interchangeability while protecting the surface of the lens.

NEW **CHROMAPOP™**

4D MAG XL

MAG series

cod. M00783

Whether you're dropping in on a hike-to line or charging through a storm day at the resort, the Smith 4D MAG XL goggles set you up with the best field of view possible. They combine the unmatched peripheral range of our BirdsEye Vision™ lens with an oversize XL frame and the terrain boosting optics of ChromaPop™, so you don't miss a wind lip or terrain change. Our MAG lens-change tech lets you swap lenses to match the light conditions with ease. Their XL size and temple cut relief cut outs make them the only OTG compatible goggles in our 4D lineup. Buckle up and embrace the fall line with confidence.

VISION

Smith MAG lens change system uses magnets for quick, easy lens changes
ChromaPop™ lenses enhance contrast and natural color to make the details pop
BirdsEye Vision™ clarifies not just your line, but the riders in your periphery
5X™ anti-fog inner lens for advanced fog-free performance
Over the glasses (OTG) compatible

FIT

Medium / Large fit
QuickFit strap adjustment system lets you find the right fit fast
Three-layer DriWix face foam wicks moisture for a fog-free fit

INTEGRATION

Designed for ultimate integration with Smith helmets for maximum comfort, venting and fog-free performance
AirEvac™ ventilation system integrates with Smith helmets for fog-free lenses
Ultra-wide, silicone-backed strap stays put

INCLUDED

Two lenses: Bright light and low light ChromaPop™ performance tints
Smith x gogglesoc™ lens protector
Goggle hard case with microfiber bag

I/O MAG XL

MAG series

cod. M00713

You can only scope your line if you can see where you're going. Putting on the Smith I/O MAG XL goggles is like flipping the switch from regular to extra-widescreen. Our ChromaPop™ lens tech boosts color and contrast, so you get the clearest picture of the terrain ahead. Our highest level of anti-fog treatment and air flow keep the view sharp. Whether the day dawns clear or stormy, lens swaps are a snap thanks to our quick-swap MAG lens system. Because no two faces are the same, the XL model expands on the standard size for those looking for the I/O MAG style with a larger look and feel.

VISION

Smith MAG lens change system uses magnets for quick, easy lens changes
ChromaPop™ lenses enhance contrast and natural color to make the details pop
Spherical Carbonic-x lens for distortion-free optics and impact resistance
5X™ anti-fog inner lens for advanced fog-free performance
TLT lens technology for crystal clear vision
Fits over the glasses (OTG) and is compatible with our optical docking system (ODS) prescription lens insert

Squad MAG

MAG series

cod. M00756

From bright and sunny to dark and stormy, everyday on the mountain has its own personality. The Smith Squad MAG goggles include two interchangeable lenses and our easiest lens change system so you always have the right tint for the conditions. Six magnetic contact points and two simple levers let you change lenses anywhere, anytime. The cylindrical lens design offers a wide field of view and our contrast-enhancing, color-boosting ChromaPop™ technology gives you elevated clarity and detail for alpine runs and tree stashes alike, all with the option of a quick lens change anytime the conditions warrant. Our AirEvac™ helmet integration design helps keep them fog free through it all.

Skyline

Spherical series

cod. M00681

Flip the switch to full screen and take in the whole mountain. The Smith Skyline goggles match the full-screen view of rimless, spherical lens goggles with a medium fit. Anticipate every turn with the benefit of ChromaPop™ lens tech to bring the snow texture and wind features to life with enhanced contrast and color definition. Pair them with the Smith helmet of your choice for unmatched airflow and fog-free vision at the resort or on backcountry missions alike.

VISION

Available with ChromaPop™ lens: ChromaPop™ enhances contrast and natural color to make the details pop
Spherical Carbonic-x lens for distortion-free optics and impact resistance
Fog-X anti-fog inner lens for fog-free performance
TLT lens technology for crystal clear vision

FIT

Medium fit
Responsive Fit™ frame adjusts to your face for a precise, comfortable fit
QuickFit strap adjustment system lets you find the right fit fast
Three-layer DriWix face foam wicks moisture for a fog-free fit

Sequence OTG

Over the glass series

cod. M00768

From dark and stormy to bright and sunny and everything in between, the Smith Sequence OTG goggles give you the visual advantage of our ChromaPop™ lens tech with the trusted fit of our over-the-glasses specific shape. Designed with medium size faces in mind, they offer a helmet-compatible, pressure-free fit that lets your glasses sit naturally for comfort that lasts all day. Their spherical lens maintains distortion-free clarity across your full range of peripheral vision, and the ventilated construction regulates air flow for a fog free view even when wearing a helmet. Welcome to a contrast-enhancing, color-popping world to define every terrain feature, no matter the lighting.

VISION

Available with ChromaPop™ lens: ChromaPop™ enhances contrast and natural color to make the details pop

HELMETS

Smith innovation featuring Koroyd®

Developed as an energy absorber in the aerospace industry, cylindrical structures were found to be one of nature's strongest forms; a form that could offer the greatest impact absorption for a given length. Koroyd® utilizes cylinders to create a structure that behaves differently than traditional protection materials. Traditional materials act like a spring which stores energy and then releases it, Koroyd® is a true energy absorber which converts the kinetic energy by crumpling. This translates into better absorption of impact energy.

KOROYD

CRUMPLE

Koroyd instantly crumples consistently on impact

ABSORB

Absorbs energy through 80% of the material thickness

PROTECT

Protection without compromise

BARRIER FOR YOUR BRAIN

Designed for dynamic, real life accidents, and engineered for safety so you can venture further with confidence. Koroyd® crumples instantly and continuously as your head rolls through multiple impact zones, absorbing maximum force in a controlled manner, minimizing energy transferred to your head.

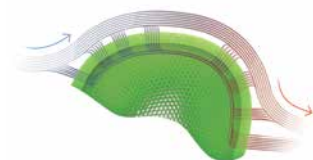

HIGH PERFORMANCE

Koroyd® provides confidence-inspiring protection without compromise on everyday performance needs.

ULTRALIGHT

Koroyd® is 95% air. This enables lighter, smaller, faster protection, causing less fatigue for life on the move.

BREATHABILITY

The protective core covers strategic zones whilst the open cells allow hot air to escape and fresh air to go with your flow.

MIPS technology

MULTI-DIRECTIONAL IMPACT PROTECTION SYSTEM

WHAT IS MIPS?

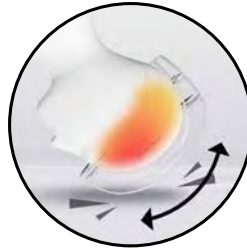

The Mips® safety system is designed to provide added safety for helmets in many accidents.

For certain impacts, the Mips system can reduce harmful forces that might otherwise be transferred to the user's head.

TRADITIONAL HELMET

Traditional helmets are designed and tested for straight impacts, but most impacts are angled, which can cause rotational motion to the head.

BRAIN DAMAGE

The rotational motion can cause brain injuries.

MIPS HELMET

The Low Friction Layer is intended to help reduce the rotational motion to the head in certain angled impacts.

STRAIGHT VS ANGLED IMPACTS

The brain is typically more sensitive to rotational motion than linear motion because it has shear properties similar to water or gel. When different parts of the brain move relative to each other because of rotational motion, the tissues can stretch, which can cause concussions or other brain injuries.

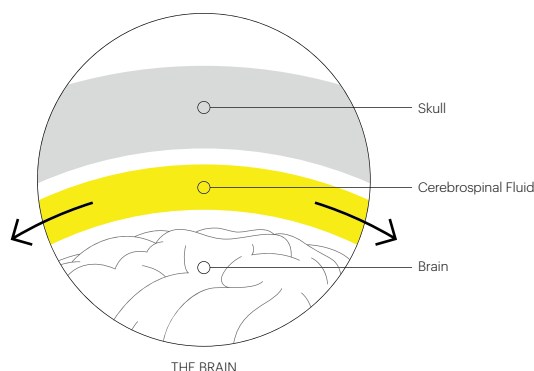

Rotational motion is a common cause for concussions and more severe brain injury in oblique hits to the head. The Mips system consists of a low friction layer that is mounted inside the helmet. In a crash, the low friction layer is designed to move slightly inside the helmet to help redirect forces away from the head. This is intended to help reduce the risk of brain injury.

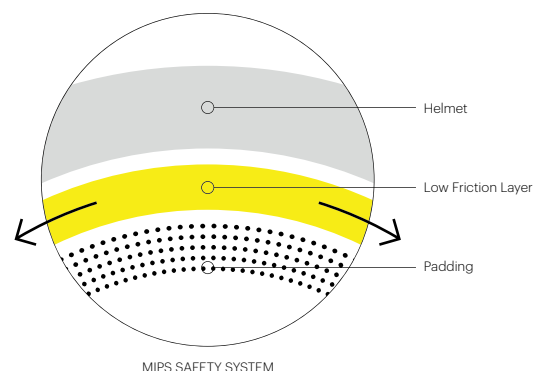

Most traditional helmets are designed for straight impacts, but most impacts are angled. The low friction layer may reduce the rotational force of angled impacts.

SAFETY SYSTEM THAT MIMICS THE BRAIN

Unlike traditional helmets, which are mainly designed and tested for straight impacts, the Mips system's low-friction layer mimics the brain's own system for protection against rotational motion.

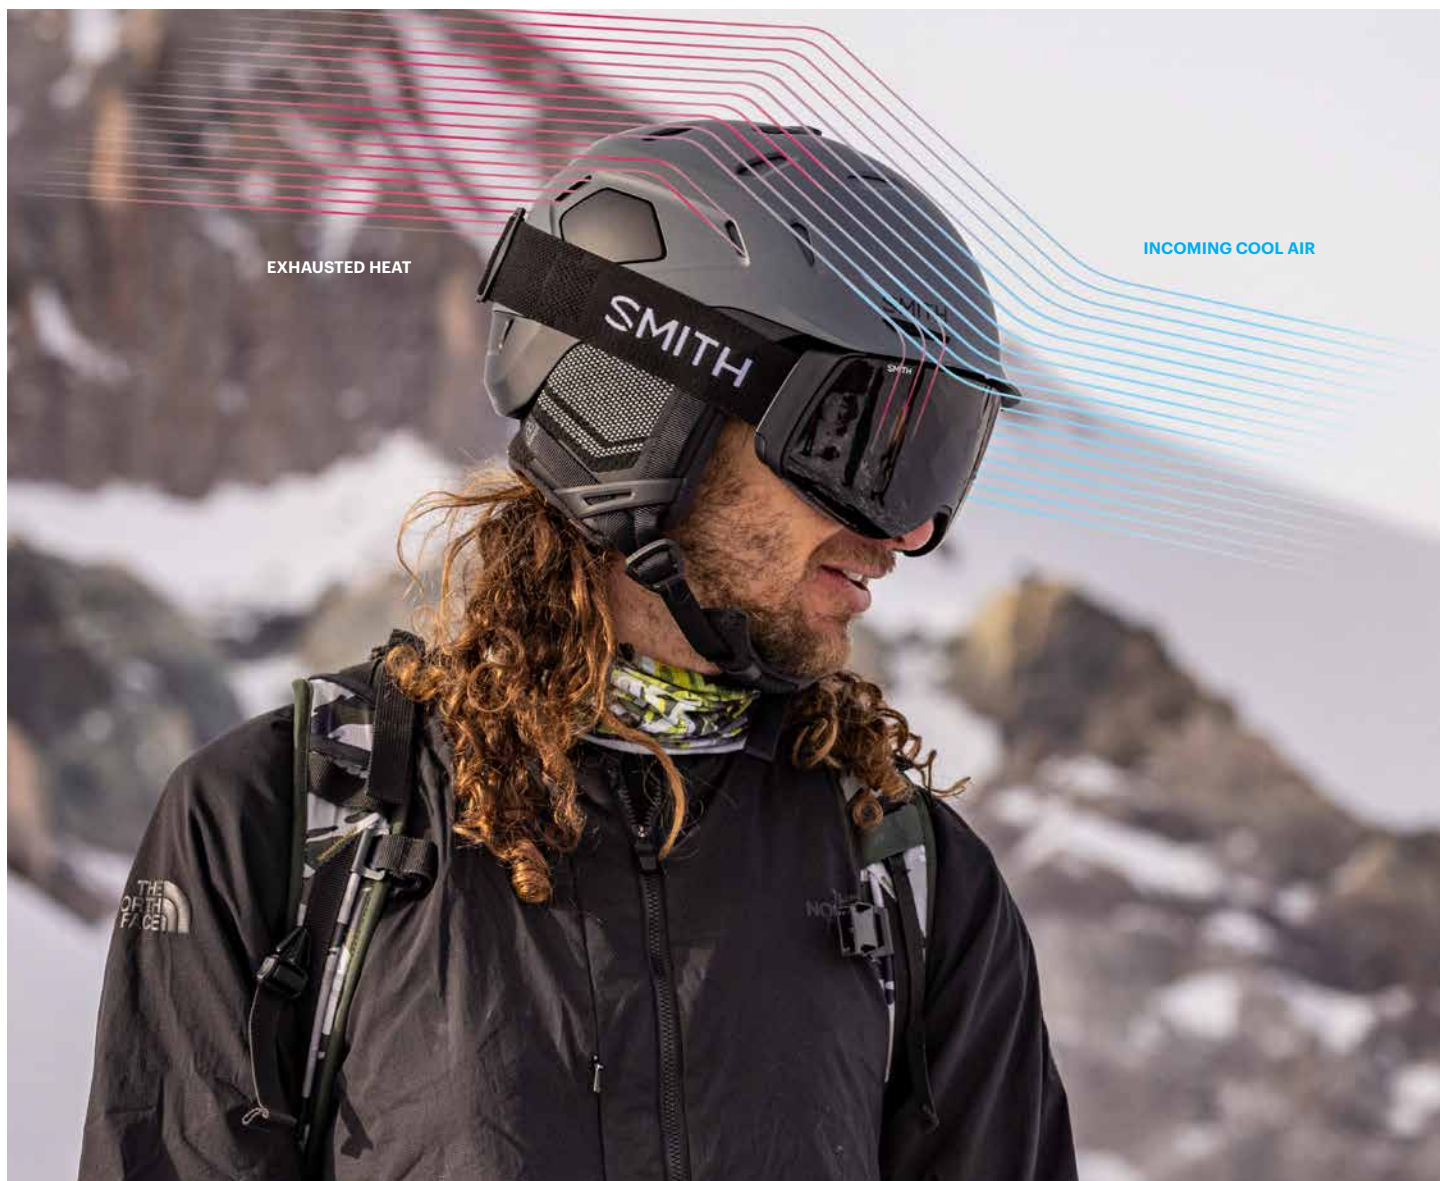

THE BRAIN

MIPS SAFETY SYSTEM

The cerebrospinal fluid is our natural protection system that allows the brain to move relative to the skull.

Ultimate Integration

INTEGRATION BEGINS WITH A PRECISE FIT

Ultimate integration starts with the precise fit of the Smith goggle and helmet. Our helmets are designed to match the curvature of the goggle frame, eliminating “gaper gap” and allowing precise alignment between the helmet *AirEvac™* and the goggle venting systems.

AIREVAC: MAXIMUM AIRFLOW IS CRUCIAL

Goggles fog when standard helmets trap warm, moist air in the goggle chamber. Smith's *AirEvac™* ventilation systems generate maximum airflow that pulls warm, fog-causing air out of the goggle. The warm air is allowed to exhaust out of the top of the goggle and begin its path through the helmet's *AirEvac™* system.

REAR EXHAUST VENTILATION

The warm air that originally built up in the goggle has been forced out via the *AirEvac™* ventilation system, has traveled through the *AirEvac™* EPS vent channels, and is now being exhausted at the furthest distance possible from the goggle. Ultimate integration between goggle and helmet from start to finish.

Ventilation and Construction

HYBRID SHELL CONSTRUCTION: *Lightweight and low profile*

Smith's hybrid shell construction combines separate lightweight and durable shells to create an entirely new helmet category. By fusing our tough bombshell ABS construction with flyweight in-mold technology, our hybrid shell construction optimizes the favorable traits of each material in this revolutionary process. The result is a modern design that provides a lightweight, low profile, perfectly fitting helmet. Hybrid shell construction also creates a clean, smooth top surface by enabling the low profile Regulator to function with reduced mass and volume.

IN-MOLD SHELL CONSTRUCTION: *Lightweight and low profile*

The performance standard for many years, in-mold construction creates a PC shell helmet with an EPS liner to maximize weight reduction. Lightweight, comfortable and offering value for every ounce, in-mold construction is the flyweight winner.

BOMBSHELL CONSTRUCTION: *Tough for all-season use*

Bombshell construction uses an injection molded ABS shell to withstand high-impacts and offer unparalleled durability, dent, and ding resistance. If you expect your helmet to be as tough as your truck, bombshell delivers.

IN-MOLD MATERIAL

BOMBSHELL MATERIAL

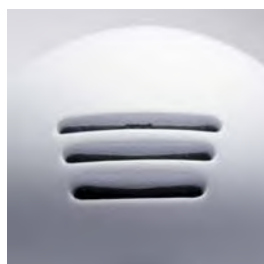

DUAL REGULATOR ADJUSTABLE VENTILATION

Temperature control is the most important feature when considering how to enjoy the entire day on the hill. Our Dual Regulator ventilation system independently controls the front and rear sections of the helmet's venting, allowing you to moderate your body temperature even in extremely cold conditions. By exhausting heat through the rear vents while maintaining a sealed front end, your body can effectively cool down if needed and avoid the dreaded "ice cream headache."

SINGLE REGULATOR ADJUSTABLE VENTILATION

Adjustable, easy to use and extremely effective climate control, our low profile Regulator ventilation system allows you to modify the amount of airflow and heat exhaust even with a gloved hand.

AIRFLOW VENTILATION

Airflow ventilation utilizes strategically placed vents for easy climate control in all conditions. Vent placement maximizes airflow and heat exhaustion in warm temperatures while minimizing undesired cold air drafts. Fabric flaps in the lining design on certain models allow you to open and close the airflow vents for adjustable comfort.

A skier in a white and black jacket and helmet is skiing down a snowy slope, surrounded by evergreen trees. The skier is kicking up a cloud of snow. The entire image has a magenta color overlay.

Welcome to the Party!

ALECK

NUNCHUCKS

Smith x Aleck Nunchucks are the Bluetooth helmet speakers that bring premium sound for days, and hands free group communication to any ski or snowboard helmet. Glove-friendly controls help you manage your music, comms, calls, and voice assistant while going anywhere on the mountain. The Nunchucks turn your playlist into a private concert, keeps your squad in touch on low-vis days, and the Friend Finder makes meeting up for après easy, no matter the conditions or crowds. Every day on the snow is a good one, and these Nunchucks make every run better.

Nexus

Exoskeleton protection with complete **Koroyd®** construction.

MIPS: **cod. E00534**

When you spend more days on the mountain than off, the Smith Nexus is your helmet for bomber protection that holds up season after season. In addition to a hybrid shell that balances a lightweight, low-profile design with a durable hardshell exterior, the Nexus steps up impact coverage with Koroyd® throughout the helmet, a fully-vented material that absorbs more energy in a crash than traditional foam construction alone. Add MIPS® for increased safety during angled impacts, and you have our most advanced helmet design. Since all this protection is useless if you don't want to wear it, we dialed up the comfort level with a micro-adjustable BOA® 360 Fit System that adapts to your whole head. A sweat-wicking, odor-fighting liner keeps you warm, while a front and rear adjustable 24-vent design lets you regulate airflow as needed.

PROTECTION

Hybrid shell construction blends a durable exterior with a lightweight in-molded shell for durability where you need it most while keeping the helmet light
Complete Koroyd® coverage for lightweight, energy-absorbing and ventilated impact protection
MIPS® Brain Protection System reduces rotational forces caused by angled impacts to the head
Exoskeleton enhances impact protection in side impact zones

FIT

BOA® 360 Fit System offers the most adjustable fit with the turn of a dial for on-the-fly micro-adjustability
Ionic+™ antimicrobial lining offers sweat-activated control
Fidlock® strap buckle offers easy one-hand operation
Removable ear pads for form-fitting comfort

INTEGRATION

AirEvac™ ventilation system integrates with Smith goggles for fog-free lenses
24 vents
Aleck™ audio system compatible

INCLUDED

Smith helmet bag

Vantage

Lightweight and tough with zonal Koroyd® construction.

MIPS: **cod. E00675**

Standard: **cod. E00655**

When you're dedicated to skiing or riding all season long, little things make a big difference when it comes to comfort, safety, and durability. The Smith Vantage helmet is loaded with tech that makes a difference. Zonal Koroyd™ complements MIPS® for energy-absorbing impact protection to give you confidence while exploring in or out of bounds. The hybrid shell enhances day-to-day durability and includes a full 21 vents with dual adjustability that lets you fine-tune airflow to meet the conditions. As for fit, The Vantage uses the BOA® 360 Fit System for the ability to micro-adjust the size around your whole head with the turn of dial. Add the proven Smith AirEvac™ tech for a fog-free goggle interface, and you have a helmet to match your dedication.

PROTECTION

Level

Lightweight and tough with zonal **Koroyd®** construction.

MIPS: **cod. E00628**

Standard: **cod. E00629**

Like a good day on the mountain, the Smith Level ski and snowboard helmet is at your service for ranging far and wide. It brings the added energy absorption of zonal Koroyd® and the advanced angled impact protection of MIPS® to let you focus on ripping high speed arcs in the alpine and chasing untracked lines in the trees. The hybrid shell design adds durability without weighing you down for a helmet that you will actually take with you when the backcountry beckons. And because you love to ski all day, the fit and vents are adjustable on the fly, so you never need to slow down.

PROTECTION

Hybrid shell construction blends a durable exterior with a lightweight in-molded shell for durability where you need it most while keeping the helmet light. Zonal Koroyd® coverage for lightweight, energy-absorbing and ventilated impact protection.

MIPS® Brain Protection System reduces rotational forces caused by angled impacts to the head.

Select colorways offered without MIPS® system.

FIT

VaporFit Snow™ dial adjustment system offers 270-degree fit adjustment with the turn of a dial.

Ionic+™ antimicrobial lining offers sweat-activated control.

Removable Snapfit SL2 ear pads add warmth and are audio-chip compatible.

Altus

Lightweight with zonal Koroyd® construction.

MIPS: **cod. E00515**

Standard: **cod. E00516**

You love a good storm day as much as carving under blue skies. The Smith Altus ski and snowboard helmet lets you adjust the venting on the fly to match the weather conditions and your output. Of course, it brings safety innovations including zonal Koroyd® and MIPS® for the confidence to get after it in any snow conditions, too. It's light enough for backcountry missions and cuts a classic profile.

PROTECTION

Lightweight in-mold construction fuses the exterior shell and EPS foam for a one-piece design that's lightweight and durable
Zonal Koroyd® coverage for lightweight, energy-absorbing and ventilated impact protection
MIPS® Brain Protection System reduces rotational forces caused by angled impacts to the head

Accel

Lightweight, alpine-ready tech for exploring the whole mountain.

MIPS: **cod. E00561**

Standard: **cod. E00562**

Blue sky and high-speed groomers in the alpine or a storm day spent chasing fresh tracks in the trees, the Smith Accel helmet is the only helmet you need. It balances the latest impact protection tech with 360-degree fit adjustability and one-hand-adjustable vents for all-day comfort in any weather. MIPS® and Zonal Koroyd® work together to absorb impacts in the event of a crash. It's the lightweight do-it-all helmet you can count on no matter where the day takes you.

PROTECTION

Lightweight in-mold construction fuses the exterior shell and EPS foam for a one-piece design that's lightweight and durable

Summit

Lightweight and tough with zonal **Koroyd®** construction.

MIPS: **cod. E00536**

Go light. Go Far. From skin track to boot pack and summit bids, the Smith Summit snow helmet is our lightweight go-to lid for backcountry touring and ski mountaineering. Its triple-certified design meets global alpine ski certs plus international mountaineering standards. The design blends a minimalist approach with mountaineering-specific details to keep it ultra-light yet ready for alpine pursuits. Zonal Koroyd® and MIPS® impact protection absorb energy in the event of a fall. A Smith custom BOA® Fit System offers a micro-adjustable fit that also collapses into the helmet for easy stuffing into your pack. External bungee loops offer secure attachment to the outside of a pack, too. Integrated headlamp strap routing keeps a light in place, and a beanie and ball cap-compatible design lets you match the weather conditions. Thirty-three fixed vents keep the air moving and your goggles or glasses fog-free. Go ahead and set your sights on the summit.

PROTECTION

Hybrid shell construction blends a durable exterior with a lightweight in-molded shell for durability where you need it most
Zonal Koroyd® coverage for lightweight, energy-absorbing and ventilated impact protection
MIPS® Brain Protection System reduces rotational forces caused by angled impacts to the head
Certifications: ASTM F 2040, CE EN 1077: 2007 CLASS B, EN 12492

FIT

Code

Low profile with zonal **Koroyd®** construction.

MIPS: **cod. E00538**

It's the little things that make a difference. Fresh snow, a day off, and a helmet that prioritizes comfort and style right along with crash protection. The Smith Code ski and snowboard helmet does it all. Zonal Koroyd® and MIPS® impact protection absorb energy in the event of a crash. The super-adjustable BOA® 360 Fit System and a warm, knit liner let you customize the fit for comfort that lasts from first chair to last. Six engineered vents work with your goggles for fog-free vision, and a magnetic chinstrap buckle makes for easy one-hand operation. Not to mention it's nice and light, too. The little things add up.

PROTECTION

Lightweight in-mold construction fuses the exterior shell and EPS foam for a one-piece design that's lightweight and durable
Zonal Koroyd® coverage for lightweight, energy-absorbing and ventilated impact protection

NEW KORROYD Mips

Method Pro

Step up your style with the protection to match.

MIPS: **cod. E00559**

Explore the mountain. Lap the park. Drop in on your secret stash. No matter where you like to ski or ride, the Smith Method Pro sets you up for all day comfort with our best fit package and the latest crash coverage including Zonal Koroyd® and MIPS® impact protection. It elevates the standard Method helmet with a micro-adjustable fit, premium ear pads and a glove-friendly magnetic buckle. Its clean lines get even cleaner when you remove the goggle strap retainer if you prefer to wear your goggles under your helmet. Nine fixed vents work with your goggles to manage airflow for consistent, fog-free vision. It also meets the Global Recycled Standard with 68% recycled or upcycled content. Buckle in and drop in on your line of choice.

PROTECTION

Lightweight in-mold construction fuses the exterior shell and EPS foam for a one-piece design that's lightweight and durable
Zonal Koroyd® coverage for lightweight, energy-absorbing and ventilated impact protection
MIPS® Brain Protection System reduces rotational forces caused by angled impacts to the head

MIPS: **cod. E00542**

Standard: **cod. E00543**

Park days, storm riding or groomer hot laps, the Method helmet sets you up with the latest safety innovations, including MIPS™ and zonal Koroyd®, for enhanced energy absorption in the event of a crash. Its minimalist exterior packs in eight fixed vents and our proven AirEvac™ tech to keep the air flowing and your goggles fog-free. Buckle up, tune in, and hit the hill.

PROTECTION

Lightweight in-mold construction fuses the exterior shell and EPS foam for a one-piece design that's lightweight and durable
Zonal Koroyd® coverage for lightweight, energy-absorbing and ventilated impact protection
MIPS® Brain Protection System reduces rotational forces caused by angled impacts to the head
Select colorways offered without MIPS® system

FIT

Self-adjusting lifestyle fit system flexes to match your head shape for maximum comfort
AirEvac™ ventilation system integrates with Smith goggles for fog-free lenses
Removable ear pads for form-fitting comfort

INTEGRATION

Designed for ultimate integration with Smith goggles for maximum comfort and venting
Eight fixed vents for consistent airflow
Removable Snapfit SL2 ear pads add warmth and are audio-chip compatible
Removable goggle strap lock for streamlined shell when goggles are worn under helmet
Beanie compatible
Aleck™ audio systems compatible

INCLUDED

A high-altitude mountain landscape featuring snow-covered peaks and rocky terrain. The foreground shows a vast, snow-covered slope with visible tracks and rocky outcrops. In the middle ground, several jagged, snow-dusted mountain peaks rise against a clear blue sky. The background consists of more distant, hazy mountain ranges. The overall scene is bright and clear, suggesting a sunny day at high altitude.

JUNIORS

Grom

Junior series

cod. M00666

Amplify your young shredder's view of the mountain. The Smith Grom goggles share the same color- and contrast-boosting ChromaPop™ lens tech as our adult goggles, so kids get a clear read on every wind lip, landing, and tree glade. Add distortion-free clarity and impact resistance, and you have the goggle to fuel the fire for keeping it creative on the mountain. They are over-the-glass compatible with a pressure-free fit that feels good all day.

VISION

Available with ChromaPop™ lens: ChromaPop™ enhances contrast and natural color to make the details pop
Spherical Carbonic-x lens for distortion-free optics and impact resistance
Fog-X anti-fog inner lens for fog-free performance
TLT lens technology for crystal clear vision

FIT

Youth fit medium
Dual-slide strap for easy size adjustment
Two-layer DriWix face foam wicks moisture for a fog-free fit

INTEGRATION

Designed for ultimate integration with Smith helmets for maximum comfort, venting and fog-free performance
Designed to fit over your glasses (OTG)
Floating foam membrane eliminates eyeglass temple pressure
Silicone-backed strap stays put

Daredevil

Junior series

cod. M00671

You don't need to be daring or reckless to appreciate a full view of the run ahead. The Smith Daredevil goggles bring over-the-glass fit to kids' goggles. Our floating foam design eliminates eyeglass temple pressure for a distraction-free fit, and a semi-rimless design maintains a wide field of vision. Treat your aspiring freerider to enhanced depth perception and increased contrast for a true view of every wind lip, glade, and powder stash.

VISION

Cylindrical Carbonic-x lens for clarity and impact resistance with built-in Airflow technology for active ventilation
Fog-X anti-fog inner lens for fog-free performance

ARCHIVE - CIRCA 1983

Mixtapes, music videos, and big hair. Head back to the future with the 80s feel of these Smith XC sunglasses from our 1983/84 Collection. The retro vibe lives on with a flip-up lens and heritage styling dating back to the Smith Cross-Country sunglasses. *ChromaPop™* lenses make sure the future is sharp, with contrast and color-boosting optics. Acid-washed jeans and neon jackets, optional.

VISION

ChromaPop™ lenses enhance contrast and natural color to make the details pop

Flip-up lens feature

Smudge and moisture-resistant coatings for easy cleaning and clear optics

FRAME

Evolve™ bio-based frame material is lightweight and durable
AutoLock hinges hold frames open for easy one-hand on and off

Goggle-inspired strap compatible temple tips

FIT

Medium to large fit, large coverage

4-base spherical shield lens curvature

Modest wraparound fit

Megol nose pads provide non-slip grip so glasses stay put

INCLUDED

Smith archive collection fleece pouch

RX COMPATIBLE

cod. 206728

53 | 48 | 19 | 145

Where snow falls, you follow. On summit bids or high-speed descents, the Smith Venture sunglasses provide much-needed eye protection in alpine environments. They're our take on glacier glasses, with removable side shields that protect against light reflecting off snow, rock and ice. ChromaPop™ lens technology offers a terrain-boosting view of every wind drift and crevasse. Autolock hinges make for easy on and off when one of your hands is occupied with an ice axe or ski poles. And then there are the iconic round frames that look just as good glissading down a snowfield as relaxing post adventure.

VISION

ChromaPop™ polarized lenses cut glare and enhance color and contrast. ChromaPop™ Glass polarized lenses cut glare and enhance color and contrast while being highly scratch-resistant.

The ChromaPop™ Glacier Photochromic lens tint adapts to match the light conditions with less sensitivity to temperature changes plus ChromaPop™ to provide contrast and color enhancement throughout the tint range.

The ChromaPop™ Glacier Photochromic light transmission ranges from category 1 to category 4.

FRAME

Evolve™ bio-based frame material is lightweight and durable.

Removable TPU side shields block peripheral light.

Removable nose piece for added protection.

FIT

Medium fit, medium coverage.

4-Base lens curvature.

Flatter frame for an everyday, casual fit.

Megol temple and nose pads provide non-slip grip so glasses stay put.

AutoLock hinges hold frames open for easy one-hand on and off.

Easy-adjust, QuickFit temples for a customized fit.

INCLUDED

Snow goggle inspired retainer strap.

Hard case.

Microfiber pouch.

RX COMPATIBLE

cod. 204617

58 | 45 | 16 | 145

Glacier travel. High elevation summits. Spring snowfields. Eye protection in the alpine is serious business. Whether you're skiing or mountaineering, the Smith Embark sunglasses hold up to harsh, ever-changing conditions while providing a contrast-boosting view of every crevasse, wind drift and terrain feature. The UV and visible light activated Glacier Photochromic lens is less temperature sensitive than a traditional photochromic lens with a light transmission range from 45% to 7% that adapts dynamically to variations in light. ChromaPop™ delivers color and contrast-boosting performance throughout the full range of the lens, so you always have the best possible view. Removable and ventilated side shields add peripheral light coverage, and low-profile, adjustable temple arms let you customize the fit. A goggle-inspired retainer strap adds the security to keep them in place through technical ascents and high-speed descents.

VISION

Available in your choice of ChromaPop™ Glacier Photochromic Copper Blue Mirror or ChromaPop™ Polarized lenses
ChromaPop™ Glacier Photochromic lens tint adapts to match the light conditions with less sensitivity to temperature changes and full ChromaPop™ contrast and color enhancement throughout the tint range
Anti-fog and hydroleophobic coatings on the Glacier Photochromic lenses for clear optics and easy cleaning
ChromaPop™ Polarized lenses cut glare and enhance color and contrast

INTERCHANGEABLE LENS

cod. 201516

140 62 125

Charge any skintrack in the Wildcat — Smith's full coverage, hybrid construction, cylindrical lens sunglass. Constructed from durable Evolve™ frame material and flexible TPU used in Smith goggles, the Wildcat provides coverage and protection like a goggle with the airflow and comfort of a sunglass. Equipped with two-position nose pads and megol temples for no-slip fit, the Wildcat also comes with a bright light ChromaPop™ lens, and a secondary clear lens for low light overcast days.

VISION

ChromaPop™ lenses enhance contrast and natural color to make the details pop
ChromaPop™ Polarized lenses cut glare and enhance color and contrast
Light sensitive photochromic lenses adapt to changing light conditions

INTERCHANGEABLE LENS

cod. 204927

For backcountry powder missions, the Smith Bobcat sunglasses are for skiers and snowboarders who want the full coverage of the Wildcat with a smaller fit and a lightweight feel. This hybrid design pairs goggle-like coverage with the airflow and easy-wear feel of sunglasses. ChromaPop™ brings out the details in bright alpine bowls. The lens is interchangeable, and a bonus clear lens is included for low-light needs. No-slip fit details keeps them in place on high-speed descents.

VISION

Sustainable Packaging

In a continued effort into the winter 24/25 season — Smith is continuing their move toward zero plastic waste within their packaging offering and continuing their gogglesoc partnership.

The packaging updates include discontinuation of all plastic waste across new packaging of winter sports & eyewear products, including the removal of plastic windows on goggle boxes and plastic polybags previously used for lens and goggle protection.

Helmet
Packaging

**Packaging is
sustainably sourced
and 100% recyclable**

Goggle
Packaging

Easy to fold down and
recycle / store in backroom

1 MILLION polybags saved
annually across goggles

1.2 MILLION polybags
eliminated annually from
helmet production

gogglesoc™

True to its legacy of design & innovation — Smith continues its efforts in sustainability in partnering with gogglesoc™. This partnership offers a sustainable solution to keeping lenses scratch-free. All 7 goggles in our MAG family will now ship with a gogglesoc™, a 2-in-1 lens protector + cleaning cloth made from post-consumer recycled water bottles. More protection, less waste, no added cost.

Cross Merchandising

GOOGLE AND HELMET MODELS/COLORWAYS

Smith goggles and helmets are designed with the integration of style in mind. Properly merchandising Smith helmets and goggles to show this relationship will draw customers to your Smith wall like moths to a lamp. Below are a few examples of how to help your presentation and tell the Smith product line color and graphic stories so your patrons get the most out of their shopping experience. These are just a few ideas to get you started, so be creative and maximize your opportunities with your Smith Optics program.

A photograph of a skier in mid-air, jumping over a snowy ridge. The skier is a small figure on the left side of the frame, leaving a trail of snow behind them. The background features several evergreen trees covered in snow under a clear sky. The foreground is a vast, snow-covered slope with visible tracks.

Pursue your thrill.
